

CYBERKNIFE[®] KNIFELESS SURGERY IS HERE!

THE RAY OF HOPE CANCER PATIENTS HAVE BEEN SEARCHING FOR.

CyberKnife[®] is the ultimate cancer-fighting weapon at Saint Peter's University Hospital. It's called knifeless surgery because it removes tumors with no cutting, stitching or pain. Its revolutionary robotic technology uses pinpoint radiation beams to target hard-to-reach tumors anywhere in the body—including the brain, spine, liver, kidney, neck, pancreas, lung and prostate—preserving the healthy tissue around them. And not in the conventional 30 to 45 treatments—but in as few as one to five!

CyberKnife at Saint Peter's University Hospital. Treating you better...for life. **For details, call toll-free 866-702-2737 or visit saintpetershcs.com**
