

"We're making autism less puzzling."

— **Dr. Barbie Zimmerman-Bier, Developmental Pediatrics**

"Autism affects one in 94 children in New Jersey, but it also affects all the people in their lives—parents, siblings, teachers and healthcare providers. That's why at Saint Peter's we're passionate about not only treating the child, but also educating and supporting everyone around them. We assess the child's family, his or her home environment, school, medical history, diet and sleep habits, all to help us choose the proper treatment strategies. Our team of specialists works to put together the pieces of the autism puzzle to help families cope, day by day."
