

"We treat diabetes from every angle."

— **Dr. Anne Marie Van Hoven, Endocrinology**

"An estimated one in three Americans is at risk for diabetes, so early detection and treatment are crucial. At the Thyroid and Diabetes Center at Saint Peter's, we offer the most comprehensive diabetes care programs in the state—all under one roof. Our team of endocrinologists, registered dietitians, diabetes educators and clinical social workers teaches patients how to self-manage their diabetes through diet, exercise, and medication, including use of the insulin pump. Our Center is certified by the American Diabetes Association, a recognition of our leadership role in inpatient, outpatient and community-based diabetes care. Our goal is to help people with diabetes enjoy their lives, today and tomorrow."
