

"We offer the highest level of epilepsy treatment."

— **Dr. Arno Fried, Neurosurgery**

"Not all seizures are caused by epilepsy. Seizures can often be caused by changes in brain waves. At The Epilepsy Center at Saint Peter's, we have a team of specialists working to diagnose and treat epilepsy in children and adults. As a Level 4 Epilepsy Center, which is the highest rating from the National Association of Epilepsy Centers, we are certified to offer the most advanced and comprehensive programs in the state.

Our neurologists and neurosurgeons conduct extensive tests to determine the cause of seizures. Using tools like a video EEG, we monitor and record a patient's brain waves to help us evaluate electrical activity and pinpoint the exact location in the brain where a seizure occurs. Once the source is localized, we have a much better road map for treatment. For some of our patients medication is often used to control seizures, for others surgery is an option that can lead to dramatic results."
