

"We're a front runner in knee replacement."

— **Dr. Alfred Tria, Orthopedic Surgery**

"At Saint Peter's, we've always been a leader in advanced orthopedic procedures. We were one of the first hospitals in central New Jersey to offer knee implants shaped specifically for women. And we've taken that technology one step further. Our specialists now design custom knee replacements to fit each individual patient. Even our instrumentation is specifically designed for your knee and your particular condition.

The process begins with MRI blocks, molded into casts of your joints, all done prior to surgery. These casts enable us to lessen the time spent in the operating room, which leads to a smoother recovery. Our team performs close to 1,000 knee replacements a year to help patients get back in the game."
