

“We’ve been pioneers in spine surgery for decades.”

— **Dr. Marc Malberg, Orthopedic Surgery**

“At Saint Peter’s University Hospital, we’re at the forefront of spine surgery with breakthrough techniques and minimally invasive, same-day procedures. Our highly experienced team of orthopedic surgeons has helped thousands of patients suffering from spine injuries or chronic back pain.

We were the first hospital in Central New Jersey to perform a same-day, minimally invasive procedure that alleviates the pain of slipped discs. We’re also helping seniors suffering from lumbar spinal stenosis, a painful, degenerative disease that results in numbness in the legs, often causing them to walk hunched over. Our procedure prevents the nerves in the back from being pinched, helping many patients to stand upright, free from pain. At Saint Peter’s, we’re focused on helping patients recover faster and getting them back to the life they love.”
