

“We have a dedicated team to treat vascular problems.”

— **Dr. Niranjan Rao, Vascular Surgery**

“At Saint Peter's, we take a multidisciplinary approach to diagnosing and treating vascular disease. Our team of vascular surgeons, interventional radiologists and interventional cardiologists work together to achieve a high level of success in unblocking arteries and restoring normal blood flow. We start by performing a variety of non-invasive diagnostic tests to get a clearer picture of a patient's blood flow to help us determine the best course of treatment. In many cases, we can also use these same tests to detect the majority of aneurysms in the early stages, before they rupture, allowing us to avoid emergency surgery. Our goal is to use a minimally-invasive approach to all our procedures to help patients recover faster and get back on their feet in no time.”
